# Husqvarna Automower 305

## Description

Automower Connect app

Enjoy the convenience of complete command from your smartphone with the Husqvarna Automower Connect app. From edge to edge you can manage and monitor your Husqvarna robotic mower freeing you from the task of mowing your lawn with the reliability to always achieve a premium cut. Make your lawn care as carefree as possible with Automower Connect. Cellular, Wi-Fi and Bluetooth connectivity available, dependent on model.

#### Weather timer

Adjusts the working time to the lawn's growth rate, which decreases wear on lawn and mower and it will maximise its mowing time during periods of strong grass growth. In sunny or dry weather, or late in the season, the mower will spend less time mowing, which decreases wear on lawn and mower.

Secondary Area

Set up a secondary area if your lawn is split into two areas that are not connected with a passage for your mower. In order to set up a secondary area you need to set up the boundary wire to create an island around the secondary area. Once installed you will have to manually move the mower between these two areas and the mower will mow for a selected period of time or until the battery is empty.

Compact and lightweight

Small compact size and low weight gives increased maneuverability in small gardens and simplifies manual moving between different grass areas.
