

IforWilliamsTrailers TB Tiltbed

Description

For further information and current delivery times, please contact Ripon Trailer Centre - 01765 698948

Introducing the new range of Tiltbed trailers from Ifor Williams Trailers, designed specifically for the landscape and car transportation industry. Choose from six trailer models all with a very generous overall width of 2100mm and four length options, two of which are our first Tiltbed tri-axle models.

Trailers feature a plywood floor centre which is flush with steel outer edges and are suitable for a range of vehicles including rollers and excavators. There is no raised rail around the bed of the trailer, making it a completely flat surface.

This range is ideal for loading ground care machinery or for users requiring a versatile Car Transporter which also offers the benefits of a standard Flatbed trailer.

Trailers have been designed so that ramp and skid options can be interchanged if required at a later date. With low bed height and reduced loading angles the versatility of this trailer range is increased.
