

Kuhn AERO GT 60.1

Description

Check out AERO GT trailed pneumatic fertiliser spreaders with working widths of 30, 32 and 36 m. Break free from weather constraints! With wide working widths, fast ground speed and high-capacity hopper, AERO GT spreaders can achieve daily outputs of 400 ha and more. For maximum profitability in cost-intensive fertilisation, metering and fertiliser distribution have to be optimised in order to spread the right rate in the right place. Application rates are constant, even at varying ground speeds because they are controlled separately for each of the six sections, with one metering unit and one feed roller each.
