

## Kuhn BK

### Description

The BK shredder is intended for mixed crop-breeding farms. Available in three working widths of 2.30, 2.80 and 3.20 m. Shredding improves the decomposition of crop residues. A satisfying result is achieved, if the majority of residue left is less than 5cm long, the shredding height is uniform and the residue is distributed regularly over the soil after shredding. With KUHNS shredders, you can count on proven solutions to achieve these requirements. They are efficient machines designed to shred crop residues, straw, maize and sunflower stalks, fallow and pasture land.
