

## Kuhn GA 1001

### Description

GA 6501 and GA 7501 + twin rotor rakes deliver central swaths between 5.40 m and 8.00 m. Their raking quality is impressive and they produce perfect swaths for fast dry-down. Single rotor rakes are pushed to their limits on farms with continuously increasing grassland areas. That's why a twin rotor machine with higher output and just as compact as a single rotor rake is exactly what you need. GA 6501 and 7501+ rakes meet these expectations. They have double-curved hyper-tangential mounted tine arms that produce high-quality raking and perfect swath formation for fast forage drying. These rakes include all the features of a professional rake while being great value for money and highly manoeuvrable.
