

Kuhn PROLANDER 100

Description

The PROLANDER range is available in 6 and 7.5 metre wide trailed models. It is perfectly suited to tractors from 150 to 300 hp. The PROLANDER requires very little power, 25hp per metre is enough to ensure a quality job.

The PROLANDER is now recognised as the best seedbed cultivator to manage min-till farming, as well as the best stubble cultivator in second pass. The quality of work is ensured by its 5 rows of vibrating tines which avoid any blockages even in the presence of crop residues.

Its 70x12 S-shaped tine can be equipped with two types of share, a 60°mm goose foot-share and a narrow reversible share. The great versatility of the PROLANDER offers the possibility to carry out several functions: tilth creation in the spring, stubble cultivation in a second pass

and seed bed preparation.

The PROLANDER is the ideal solution for quality pre-seeding cultivation. In addition, it is gaining popularity for mechanical destruction of weeds.
