

Sumo Rippa 3

Description

The Rippa effectively revives saddened or slumped soils. Plant growth can slow and even stop if the plant roots are not receiving enough oxygen. Oxygenating, or aerating, the soil prior to planting can encourage root growth, improve the flow of oxygen and nutrients through the soil, and help prevent future runoff. Resin-filled puncture proof-tyres
Shear-bolt protection
Working depth up to 400mm
Reversible 80mm wide points
