JOHN DEERE

NOTHING RUNS LIKE A DEERE

GET THE LATEST GUIDANCE TECHNOLOGY FOR LESS

After 20 years we will be discontinuing the SF1 and SF2 correction signals from 1st January 2021. Both the original StarFire receiver (launched in 2001) and **StarFire iTC** (launched in 2004) will no longer receive correction signals any more.

All other StarFire Receivers will continue to work without compromise. To help our valued customers take advantage of the latest developments in guidance technology, for a limited time only, we are offering large discounts on the latest systems.

UPGRADING BRINGS MANY BENEFITS

- Faster working – rapid signal acquisition and better higher speed applications
- Better accuracy ± 3 cm with 9 month in-season repeatability with SF3
- Free software upgrades – future-proofing your investment
- ISOBUS compatibility – all displays now include documentation and section control**
- Wireless data transfer possible – no USB sticks or lost data
- In addition a FarmSight Service contract includes system set-up and training
